Usable Land Area2

Proposed Treatment Level: B & BL2
Proposed Drainfield Type: Pressure Distribution
Usable Land Area: 2500 Sq. Ft.

COMMENTS

The Cowlitz County Department of Health – Environmental Health Unit (EHU) has evaluated the soil report submitted by your on-site sewage system (OSS) designer or Engineer. The following are our findings:

The EHU has evaluated the soil log(s), texture, structure, and compaction of the Soil and Site Evaluation Report submitted by a Washington State licensed Designer or Engineer.

This site appears to be able to, at this time, support an OSS as proposed.

Approved Soil and Site evaluations are valid for five (5) years from the approval date. The proposed septic primary and reserve area(s) set-aside for future septic use must be protected from grading, fill, compaction, or any other alteration that may change soil characteristics. Soil and Site evaluations may be invalidated if the proposed septic area(s) are not protected.

In order to install a septic system on this property a complete OSS design, meeting the standards of the time, must be submitted to the EHU.

For future well construction: When drilled, the well must maintain a 100' setback from the approved, proposed primary and reserve septic areas or new test holes will need to be opened and evaluated.

CONDITIONS

- **THIS IS NOT A PERMIT TO INSTALL A SEPTIC SYSTEM**
- **THIS IS NOT A DESIGN APPROVAL**
- **THIS SOIL AND SITE APPROVAL DOES NOT GUARANTEE THE PLAUSIBILITY OF SEPTIC SYSTEM APPROVAL FOR THIS SITE**

This Evaluation Valid Until: 7/24/2030

Site Characteristics:

The site is located within USDA-NRCS mapping unit 147 – Olympic Silt Loam. Typical depth to the water table is greater than 80 inches. The is well drained in the usable land areas with no mottling noted. A restrictive layer is present ranging from 43 to 48 inches in usable land area 1 and from 30 to 48 inches in usable land area 2. Typical slope ranges from 16 to 20%. The usable land area is on a southwest facing slope with a slope ranging from 16 to 20%. Vegetation in the usable land area is field grass.

Design Requirements:

Based upon the soil evaluation performed on June 11, 2025 the soil onsite is a type 5 soil and requires a designation of 5,000 sq. ft. of usable land area available for septic designation. 2 usable land areas were established each with an area of 2,500 sq. ft. for a total of 5,000 sq. ft.

Usable land area 1 has been designated using a standard pressure distribution system meeting treatment level E.

Usable land area 2 has been designated using a pre-treatment level B and BL2 system followed by a pressure distribution drain field.

Other comments or concerns: The minimum usable land area required is based on table IV WAC 246-272A.

Criteria for determining useable land area is based on WAC 246-272A required setbacks and does not guarantee that future studies performed as part of the environmental planning process will not have an impact on the useable land area. For septic design purposes, the land area required for septic design approval may be smaller or larger than the area shown on this report based on the number of bedrooms and type of system designed.
